Keyword : Quran Translation Application

Abstract:

This writing describes the application of the Quran translation, namely how to display the translation of Al Quran in Indonesian, looking for a letter in the Qur'an and its verses quickly and find a word in the Qur'an along with the number of verses that have the word, so that the younger generations with quickly and easily understand the contents of the Qur'an along with the development of an increasingly technological progress. This application uses Microsoft Access to operate. Besides easy, this application is also very interesting because it comes with the images that supports the application.
